ABOUT BRIAN STROIK

Vice Chair – Air Barrier Association of America
Manager – Building Envelope Solutions Team at
Tremco Sealants and Waterproofing
Immediate Past National Chair – BEC Building
Enclosure Council

AGENDA

BEC Standing Intro | Why we are here:
5:00 – 6:15

Dinner Served:
6:15

Event Presentation | Air Barrier Association of
America - Construction Cautions with Building
Enclosures – 1.25 CEU:
6:30 – 8:00

Building Enclosures and air barriers require care and attention to detail from the design to execution stage. With the myriad of wall configurations and choices in air barriers, insulation, and exterior cladding, not to mention the different manufacturers of these products, it can become daunting of where to start or how to ensure a high-performance enclosure. A number of key items need to be addressed both during design and the management of the construction process. These items need to be dealt with in a logical manner in a specific critical path. This presentation will review the Top 10 construction cautions with the building enclosure specific to design, pre-construction, mock-up's, field installation issues and sub-trade execution and final testing for compliance.

BEC MISSION STATEMENT

Promote and encourage discussion, training, and dialogue among all parties with an interest in building enclosures in order to facilitate improvements with respect to processes such as design, construction, inspection, approvals, codes, regulations, standards, liability matters, and the like for matters that affect the building enclosure.
